What cialis is and what it is used for?

Cialis Tablets Price In Pakistan cialis is a treatment for adult men with erectile dysfunction. This is when a man cannot get, or keep a hard, erect penis suitable for sexual activity.

Cialis contains the active substance tadalafil which belongs to a group of medicines called phosphodiesterase type 5 inhibitors. Following sexual stimulation cialis works by helping the blood vessels in your penis to relax, allowing the flow of blood into your penis. The result of this is improved erectile function. Cialis will not help you if you do not have erectile dysfunction.

Cialis(Tadalafil 20mg)

It is important to note that cialis does not work if there is no sexual stimulation. You and your partner will need to engage in foreplay, just as you would if you were not taking a medicine for erectile dysfunction.

Cialis (tadalafil) is typically taken as a 10 mg dose about 30 minutes before sexual activity when needed. The dose can be adjusted anywhere from 5 mg to 20 mg depending on response Cialis (tadalafil) should not be taken more than once a day at any dose.
